

KEMPER-KONTAKT Gert Kemper GmbH

Kehlnahtschleifer

Instructions for Use (special flap disc)

You have decided to use a folded KEMPER-Schleifbold® (Schleifbold® F, FR and FMS) for abrasive processes with angles, grooves or welding tracks at such places.

Please note that you to have special attention to the regulations of accident-protection in your country!

In order to achieve an optimum result you have to use the area of the outside diameter as the actively working area of these tools. To avoid too strong grinding at one place, please „oscillate“ with the tool and by doing so, starting points are avoided as well.

Schleifbold® F was designed for the use on stationary machines, Schleifbold® FR for angle grinders and Schleifbold® FMS for other drives, e.g. drilling machines. A better assembly of Schleifbold® FR can be realized by using of a special nut M14.
